Problem Solving
The problem-solving agent performs precisely by defining problems and several solutions. So we can say that problem solving is a part of artificial intelligence that encompasses a number of techniques such as a

tree, B-tree, heuristic algorithms to solve a problem. We can also say that a problem-solving agent is a result-driven agent and always focuses on satisfying the goals. Steps problem-solving in AI: The problem of AI is directly associated with the nature of

humans and their activities ...

Problem Solving in Artificial Intelligence

It can be done by building an artificially intelligent system to solve that particular problem. To do this, one needs to define the

problem statements first and then generating the solution by keeping the conditions in mind. Some of the most popularly used problem solving with the help of artificial intelligence are: Chess.

Strong AI, also called Artificial General Intelligence (AGI), is AI that more fully replicates the autonomy of the human brain—AI

that can solve many types or classes of problems and even choose the problems it wants to solve without human intervention. Strong AI is still entirely theoretical, with no practical examples in use today.

What is Artificial Intelligence (AI)? | IBM

This course is about the theory and practice of Artificial Intelligence. We will study modern techniques for computers to represent task-relevant information and make intelligent

(i.e., satisficing or optimal)
decisions towards the
achievement of goals. The search
and problem solving methods are
applicable throughout a large
range of industrial, civil, medical,
financial, robotic, and information
systems.
