Once an experienced woodworker said to me, "There is no scrap wood, just pieces which have not met the right hand". Back in the days when I was starting with Wood Craft, I was desperately looking for the go-to guide about the processes and the tools involved. Woodworking is a vast subject with many branches or sub-genres of this craft like Cabinet Making, Wood Carving, Joinery, Carpentry, and Woodturning. The online content was information overload and not presented in a sequential manner. The books I referred were either focused on a few processes or assumed that I had the necessary information. Also, I found that most of the books were a little aged. There are two ways of learning; one is learning from subject matter experts who have years of experience, and then there are people who are just a few steps ahead of you in their journey. I am the second one, five years into this hobby, and still learning from the experts. I still remember the initial doubts I had and the tips which helped me. This book is for people who are in their first lap (0-3 years) of the wood-crafting journey and want to have a holistic idea of

As said in the woodworking community: Measure Twice and Cut Once and let's start the journey.
