The secret history of our most vital organ--the human heart The Man Who Touched His Own Heart tells the raucous, gory, mesmerizing story of the heart, from the first "explorers" who dug up cadavers and plumbed their hearts' chambers, through the first heart surgeries--which had to be completed in three minutes before death arrived--to heart transplants and the latest medical efforts to prolong our hearts' lives, almost defying nature in the process. Thought of as the seat of our soul, then as a mysteriously animated object, the heart is still more a mystery than it is understood. Why do most animals only get one billion beats? (And how did modern humans get to over two billion--effectively letting us live out two lives?) Why are sufferers of gingivitis more likely to have heart attacks? Why do we often undergo expensive procedures when cheaper ones are just as effective? What do Da Vinci, Mary Shelley, and contemporary Egyptian archaeologists have in common? And what does it really feel like to touch your own heart, or to have someone else's beating inside your chest? Rob Dunn's fascinating history of our hearts brings us deep inside the science, history, and stories of the four chambers we depend on most.

An urgent picture of medical care in our cities, written by an emergency room physician (and co-author of the New York Times bestseller The Pact) who grew up in the very neighborhood he is now serving [A pull-no-punches look at health care from a seldom-heard sector . . . Living and Dying isn't a sky-is-falling chronicle. It's a real, gutsy view of a city hospital.](#)[Essence](#) In this book, Dr. Sampson Davis looks at the healthcare crisis in the inner city from a rare perspective: as a doctor who works on the front line of emergency medical care in the community where he grew up, and as a member of that community who has faced the same challenges as the people he treats every day. He also offers invaluable practical advice for those living in such communities, where conditions like asthma, heart disease, stroke, obesity, and AIDS are disproportionately endemic. Dr. Davis's sister, a drug addict, died of AIDS; his brother is now paralyzed and confined to a wheelchair as a result of a bar fight; and he himself did time in juvenile detention[a wake-up call that changed his life.](#) He recounts recognizing a young man who is brought to the E.R. with critical gunshot wounds as someone who was arrested with him when he was a teenager during a robbery gone bad; describes a patient whose case of sickle-cell anemia rouses an ethical dilemma; and explains the difficulty he has convincing his landlord and friend, an older woman, to go to the hospital for much-needed treatment. With empathy and hard-earned wisdom, Living and Dying in Brick City is an important resource guide for anyone at risk, anyone close to those at risk, and anyone who cares about the fate of our cities.

This Sacred Life re-describes the meaning of this world and the value and purpose of human life within it.

It seems unthinkable that citizens of one of the most powerful nations in the world must risk their lives and livelihoods in the search for access to necessary health care. And yet it is no surprise that in many places throughout the United States, getting an abortion can be a monumental challenge. Anti-choice politicians and activists have worked tirelessly to impose needless restrictions on this straightforward medical procedure that, at best, delay it and, at worst, create medical risks and deny women their constitutionally protected right to choose. Obstacle Course tells the story of abortion in America, capturing a disturbing reality of insurmountable barriers people face when trying to exercise their legal rights to medical services. Authors David S. Cohen and Carole Joffe lay bare the often arduous and unnecessarily burdensome process of terminating a pregnancy: the sabotaged decision-making, clinics in remote locations, insurance bans, harassing protesters, forced ultrasounds and dishonest medical information, arbitrary waiting periods, and unjustified procedure limitations. Based on patients' stories as well as interviews with abortion providers and allies from every state in the country, Obstacle Course reveals the unstoppable determination required of women in the pursuit of reproductive autonomy as well as the incredible commitment of abortion providers. Without the efforts of an unheralded army of medical professionals, clinic administrators, counselors, activists, and volunteers, what is a legal right would be meaningless for the almost one million people per year who get abortions. There is a better way--treating abortion like any other form of health care--but the United States is a long way from that ideal.
