Fire pumps are an essential part of the fire protection system for buildings, as they provide water flow at a higher pressure for fire suppression. Fire pump inspections and maintenance are crucial for every facility, as a fire event can result in major loss in a building with a failed fire or booster pump.

**Fire Pump Inspection And Maintenance Tips - Fireline**

For example, the fire pump motor with the greater inrush current per Table 6-5.1.1 starts first, the second largest starts second, and so on. After you start all fire pumps, you can connect other loads (if any) to the generator. Note: You must place transfer equipment in the pump room per Sec. 6-6.4 in NFPA 20.

**Designing Electrical Systems for Fire Pumps | EC&M**

The pump room must be provided with a door and unobstructed passageway large enough to allow removal of the largest piece of equipment. Fire pumps shall be located within rooms that are separated from all other areas of the building by two-hour fire barriers or horizontal assemblies constructed per the IBC.

A fire pump is a part of a fire sprinkler system's water supply and powered by electric, diesel or steam. The pump intake is either connected to the public underground water supply piping, or a static water source (e.g., tank, reservoir, lake). The pump provides water flow at a higher pressure to the sprinkler system risers and hose standpipes. A fire pump is tested and listed for its use ...

**Fire pump - Wikipedia**

Horizontal elbows or tees upstream of a fire pump must be 10 pipe diameters from the suction flange on a split-case fire pump. Pumps must maintain a positive suction pressure at the suction flange. Electrical feeds to fire pump controllers must have a two-hour fire rating. Fire pumps can't be used as pressure-maintenance pumps.

**Fire Pump Sizing and Selection - PHCP Pros**

Fire Pump Room Equipment. A fire pump is a part of a fire sprinkler, internal and external Hydrant system's water supply and can be powered by electric, diesel pump. The pump intake is connected to the independent fire sump. The pump provides water flow at a higher pressure to the sprinkler system, risers and hose standpipes. A fire pump is tested and listed for its use specifically for fire service by a third-party testing and listing agency, such as UL or FM Global.
