This volume describes new frontiers in medical and service robotics in the light of recent developments in technology to advance robot design and implementation. In particular, the work looks at advances in design, development and

Where To Download

Implementation of
contemporary
surgical,
rehabilitation and
biorobots. Surgical
robots allow surgeons
greater access to
areas under operation
using more precise
and less invasive
methods.

Rehabilitation robots
facilitate and support
the lives of the infirm,

Where To Download

elderly people, or those with dysfunction of body parts affecting movement. These robots are also used for rehabilitation and related procedures, such as training and therapy. Biorobots are designed to imitate the cognition of humans and animals. The need to

Where To Download

substitute humans working on delicate, tiresome and monotonous tasks, or working with potentially health-damaging toxic materials, requires intelligent, high-performance service robots with the ability to cooperate, advanced communication and

Where To Download

sophisticated
perception and
cognitive capabilities.
Progress in this field
is fast and results
need to be
disseminated to
stimulate both
practical applications
and further research.
Thus, these papers
are a valuable
addition to existing
literature.
