The stage that the cell is currently in is prophase. Also, the cell walls in the onion root were barely visible, but the nuclei were very clear. This was all seen in 400X total magnification. When observing the whitefish embryo cells for the stage of metaphase, the cells took on a circular shape and, like the onion root cell, many nuclei can be seen.

Onion Root Cell Cycle Lab Answers | SchoolWorkHelper

Onion Cell. An onion is a multicellular (consisting of many cells) plant organism.As in all plant cells, the cell of an onion peel consists of a cell wall, cell membrane, cytoplasm, nucleus and a large vacuole. The nucleus is present at the periphery of the cytoplasm. The vacuole is prominent and present at the centre of the cell. It is surrounded by cytoplasm. The presence of a cell wall and a large vacuole are indicators that help identify plant cells, such as seen in the onion peel.

Onion and Cheek Cells (Theory)—Class 9—Online Lab

Describe the shape of single cell of an onion epidermis. 2. Describe the arrangement of the cells with respect to one another. 3.

Onion Cell Lab Report Discussion Essay Example

Staining the onion cells. 1. Lift up the cover slip and add one or two drops of iodine to the slide. 2. Lower the cover slip and examine the cells on higher power. 3. Iodine stains different parts of the cells so that different organelles can be seen. Draw and label the cell wall, cell membrane, cytoplasm, and nucleus. DISCUSSION QUESTIONS. 1.

The Onion Cell: Lab Assignment—WordPress.com

An onion is a multicellular plant organism. As in all plant cells, the cell of an onion peel consists of a cell wall, cell membrane, cytoplasm, nucleus and a large vacuole. The nucleus is present at the periphery of the cytoplasm. The vacuole is prominent and present at the centre of the cell.

Experiment: Onion and cheek cells | TheThinkingLab

The onion epidermis cell is the only cell that has a cell wall. In addition, it is the only cell that has a chloroplast, where the photosynthesis can happen. The cheek epithelium cell is the only one that has centrioles, the barrel-shaped organelle that is responsible for helping organize chromosomes during cell division.

Microscope Cell Lab: Cheek, Onion, Zabrina | SchoolWorkHelper

Red onion, microscope, microscope slide, cover slip, 15% Sodium Chloride solution, bottle of distilled water, colored pencils, paring knife, dish of tap water Procedure: PHASE 1 / NORMAL CELLS / DRY MOUNT 1. Carefully slice away the colored layer of cells from the red onion. This should only be the THIN PURPLE LAYER.

Osmosis Red Onion Cells—Biology—the Study of Life

Onion Cell Mitosis Worksheet Key – Cytokinesis is a point of mitosis, but the cells need to differ from one another. Anaphase is a procedure that lasts just a couple of minutes. Mitosis is the procedure of cell division that is nuclear. At this phase, chromosomes might not be visible in the nucleus, but the nucleolus is seen as a spot.

Onion Cell Mitosis Worksheet Key—SEM Espirit

Virtual Lab: Cell Cycle Lab (Onion Root Tip) In this virtual lab activity, you will be observing the cell cycle in the tip of an onion root. The root tip is responsible for the downward growth of the root and is one of the regions in the plant where cells are actively dividing and growing.

Lab Report On Onion Cell Free Essays—StudyMode

Estimate how many cells you can see under low power _ 40-200 ____ high power _ 4-10 ____ POST LAB QUESTIONS. 1. What did the onion and the elodea have in common? How were they different? Both have rectangular shapes, the elodea has visible green chloroplasts (and a green color). The onion has a visible nucleus in its center. 2. Why were no chloroplasts found in the onion cells.
