Key features of the critically ill patient are severe respiratory, cardiovascular or neurological derangement, often in combination, reflected in abnormal physiological observations. This chapter presents the principles of management of the critically ill patient. The Airway, Breathing, Circulation, Disability, Exposure (ABCDE) approach is used by physician to assess and treat the patient.

behavioral disturbances. A review of the causes and treatment of anxiety in the coronary care unit is followed by a discussion of delirium in the critically ill cardiac patient.

## **Psychiatric complications in the critically ill cardiac ...**

In the critically ill patient, arrhythmias can be caused or potentiated by increased catecholamine levels (endogenous or exogenous), hypoxia, hypercarbia, severe acidosis, gross electrolyte disturbance, and pain or anxiety. The end result is a combination of decreased cardiac output and/or increased myocardial oxygen demand.
