The Low Carbon Cities Framework (LCCF) was initiated to provide a framework to achieve sustainable development that will subsequently reduce carbon dioxide emission. LCCs are cities that apply serious and effective activities to decline their environmental impact and their carbon dioxide emission. Low carbon cities have four main focus areas on carbon dioxide emission control that include urban environment, urban transport, urban infrastructure, and buildings.

Living labs for sustainability and low carbon cities emerging in Europe have different goals and ways of working, they are initiated by various actors, and they form different types of partnerships. There is clearly no uniform definition of living labs (Schliwa, 2013, Ståhlbröst, 2008, Hillgren, 2013).

AbstractAdelaide is a medium sized low density city located in south eastern Australia. Typical of highly urbanized Australia, where abundant land and low cost private transport contribute to urban sprawl in all major cities, Adelaide is poorly placed to move to a low carbon future, despite access to abundant renewable resources and a favourable policy environment.

New partnerships for 'low carbon cities' in the UK and China. Researchers from UK and Chinese universities, including the University of Cambridge, are collaborating on four new projects to work towards achieving low carbon cities in the UK and China. The projects were announced as Chinese President, Xi Jinping visited the UK this week. The projects will receive over £3 million in funding from the UK's Engineering and Physical Sciences Research Council (EPSRC), with matched equivalent ...
